EXPERIENCE

Defence Research And Development Organisation
Research Intern (Scientific Analysis Group)

June 2023 - July 2023

Developed an AI-powered web scraping pipeline using Python, Selenium, and BeautifulSoup to extract structured/unstructured data from diverse sources. Implemented an advanced research paper scraping module for repositories like arXiv and IEEE, integrating NLP and machine learning models for text preprocessing, classification, and trend analysis, enabling automated dataset creation and academic insights.

SKILLS

Programming Languages : C , C++ , Java , Python , JavaScript

Web & Backend Development : HTML ,CSS, Flask , REST APIs

Database Management : MySQL

Tools : Git, Linux(Basics),Selenium, BeautifulSoup

AI & Machine Learning : Machine Learning Fundamentals, CNNs, NLP, Generative AI-assisted Development

Software Engineering & CS Fundamentals: Data Structures & Algorithms , OOPS Programming , OS Fundamentals

ACHIEVEMENTS

1st Runner Up (Eonverse Hackathon)

Secured 2nd Prize (1st Runner-Up) at Hackathon for building EonVerse, an innovative web platform using modern web technologies

PROJECTS

AI POWERED SKIN CANCER DETECTION

Built and deployed an AI-powered medical image classification system using CNNs (TensorFlow/Keras) trained on HAM10000 dataset. Designed end-to-end system including model training, evaluation, and deployment via Flask web application and PyQt5 desktop interface. Optimized models for scalability by exporting to HDF5 and TFLite formats, demonstrating awareness of production deployment constraints.

FACE RECOGNIZED STUDENT DATABASE SYSTEM

Developed “AttendX – Smart Attendance System” using HTML, CSS, JavaScript, and MySQL, integrating face-api.js for real-time face recognition. Implemented secure authentication, course and attendance management, and a responsive dashboard. Designed normalized database schema, dynamic UI components, and notification system, ensuring seamless user experience, data integrity, and scalable performance.

WEB SCRAPPER

Developed an AI-powered intelligent web scraping system using Flask, BeautifulSoup, and Requests with multi-threaded execution for fast content extraction. Integrated NLP-driven summarization and topic modeling via external AI APIs (Groq, Together AI, Hugging Face). Enhanced functionality with automated research paper retrieval from Semantic Scholar and arXiv, delivering structured insights with relevance scoring and key topic extraction.

CERTIFICATION

Introduction To Database Management System

Issued By NPTEL

Introduction To Modern AI

Issued By CISCO

Machine Learning Fundamentals

Issued By ALTERYX

Oracle Certified Foundations Associate

Issued By ORACLE

Introduction To Machine Learning

Issued By NPTEL
