EDUCATION

Btech In Computer Science Engineering SRM Institute Of Science And Technology	Expected 2027 CGPA : 9.77
--	------------------------------

Higher Secondary School - CBSE Bal Mandir Senior Secondary School	April 2023 88.2 %
--	----------------------

Secondary School - CBSE Bal Mandir Senior Secondary School	April 2021 87.6 %
---	----------------------

EXPERIENCE

Defence Research And Development Organisation Research Intern (Scientific Analysis Group)	June 2025 - July 2025
--	-----------------------

- Built an AI-powered research paper search engine that aggregates papers from IEEE and other platforms using keyword-based queries.
- Developed Python web scraping pipelines using Selenium and BeautifulSoup to extract research paper metadata and abstracts.
- Implemented NLP-based summarization and semantic similarity scoring, achieving over 85% relevance matching accuracy and significantly reducing manual screening effort.
- Designed Flask REST APIs for real-time querying and structured research data delivery.
- Reduced manual research discovery time by approximately 60% by automating paper ranking and comparison across more than 500+ IEEE research records using NLP-based relevance scoring.

Renault Nissan Technology & Business Centre India (RNTBCI) Industrial Project (Technology Radar)	January 2026 -April 2026(Expected)
---	------------------------------------

- Built web scraping pipelines using Selenium and BeautifulSoup to collect automotive technology data from AutoPunditz and CarDekho.
- Built data automation workflows to extract, clean, and structure over 50,000 automotive records from CarDekho and AutoPunditz, reducing data preparation time by approximately 70%.
- Implemented a machine learning–based comparison model to evaluate energy mix strategies across automotive technologies.
- Integrated an AI-powered chatbot for querying and retrieving technology insights from the platform.
- Enabled automated technology trend monitoring and comparative analysis for automotive innovation tracking.

SKILLS

Programming Languages: C, C++, Java, Python

Frontend Development: HTML, CSS, JavaScript, React

Backend Development: Flask, REST APIs

Database Management: MySQL, PostgreSQL

AI & Machine Learning: Machine Learning, Deep Learning, NLP, TensorFlow, Keras, OpenCV

Web Scraping & Automation: Selenium, BeautifulSoup, Data Extraction & Automation Pipelines

Tools & Technologies: AWS (Deployment & Cloud Services), Git, Generative AI–Assisted Development

PROBLEM SOLVING

- Solved 120+ algorithmic problems on LeetCode across data structures and algorithms.

ACHIEVEMENTS

1st Runner Up (Eonverse Hackathon)

- Developed and deployed an interactive 3D web platform on AWS using Three.js with animated objects, particle systems, and immersive UI.
- Built a virtual audio studio enabling users to record, visualize, and play audio waveforms using WaveSurfer.js.
- Implemented real-time audio effects including AutoTune, reverb, echo, pitch shift, and bass boost using Tone.js.
- Designed a dynamic UI with animations and interactive controls to enhance user experience in audio production workflows.
- Secured 2nd place in the EONVERSE Hackathon for developing an innovative web-based audio effects platform.

PROJECTS

AI-DRIVEN RESUME INTELLIGENCE & SKILL GAP ANALYSIS PLATFORM

- Built an AI-driven resume analysis system that parses resumes and matches candidates to job roles with over 88% skill-matching accuracy using NLP and Flask-based REST APIs.
- Built web scraping pipelines using Selenium and BeautifulSoup to collect job postings and required skill sets from multiple job portals.
- Implemented an NLP-based resume parser to automatically extract skills, qualifications, and experience from resumes.
- Designed a skill matching and gap analysis algorithm that identifies missing skills and generates personalized recommendations, supported by Flask-based REST APIs for real-time analysis.

FACE RECOGNITION BASED STUDENT DATABASE SYSTEM

- Built a full-stack student portal using Flask, MySQL, HTML, CSS and JavaScript with REST APIs for user authentication and management.
- Implemented real-time face detection and recognition using OpenCV, achieving over 95% recognition accuracy and automating attendance marking for students across multiple subjects.
- Built multiple modules including attendance tracking, timetable management, and fee management for students and administrators.
- Designed normalized MySQL database schemas and optimized queries for efficient storage and retrieval of student records.
- Created responsive dashboards to monitor attendance, manage student data, and streamline academic workflows.

AI-POWERED SKIN CANCER DETECTION SYSTEM

- Developed a CNN-based skin lesion classifier on the HAM10000 dataset (10,015 images across 7 classes), achieving 91% validation accuracy and outperforming baseline deep neural network models by 8%.
- Built the frontend using HTML, CSS, and JavaScript and integrated it with a Flask backend for real-time skin lesion prediction.
- Designed an end-to-end pipeline including data preprocessing, model training, and evaluation for skin lesion classification.
- Optimized the model for edge deployment by exporting it to TensorFlow Lite (TFLite), reducing the model size by approximately 4× while retaining over 89% accuracy for mobile inference.

CERTIFICATION

AWS Certified AI Practitioner

Issued By AWS

Introduction To Machine Learning

Issued By NPTEL

Introduction To Database Management System

Issued By NPTEL

Oracle Certified Foundations Associate

Issued By ORACLE

Machine Learning Fundamentals

Issued By ALTERYX

Introduction To Modern AI

Issued By CISCO
